DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Babock et al. (U.S. 5,864,176) in view of Eaton (U.S. 5,930,893).

Babock discloses a method and electro-mechanical assembly for testing chips comprising all of the applicant's claimed and disclosed limitations, except for the use of subjecting the layer ((102); column 13, lines 20-25) between the heat sink and electric heater to a crack-healing temperature cycle in which the layer is melted at least partially and re-solidified.

However, Eaton teaches the use of a thermally conductive layer between two matting surfaces, which under goes a crack-healing temperature cycle in which the layer is melted at least partially and re-solidified.

Given the teachings of Eaton, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the matting layer of Babock with a thermally conductive layer between two matting surfaces which under goes a crack-healing temperature cycle in which the layer is melted at least partially and re-solidified.

Art Unit: 3743

Doing so would provide a thermally efficient interface, which will reduce the number of air pockets between the matting surfaces.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references are cited for disclosing related limitations of the applicant's claimed and disclosed invention. Kim et al, Bernier et al, Babcock et al, Haj-Ali-Ahmadi et al, Itoh et al, Mansuria et al and Cook et al.
